

You probably have never read these 2 words in a book about Christian theology.

Crazy Brilliant.

Books on theology are lengthy. Rightly so. It takes a lot of work to understand the Bible. You can literally spend a lifetime in it and still, there's more to learn.

But it's not just about learning.

It's about knowing Christ.

But how do you get to know SOMEONE who is notoriously unpredictable?

Why do I describe GOD like THAT?

The Cross. No one saw that coming. It does not add up using our math.

1+1=2

That adds up and it always will.

Try an experiment on a calculator. Divide 3 by zero. What's the answer?

“Undefined.”

That equation will never add up.

I studied cosmology about the beginning of the Universe. The scientific consensus agrees that there were 3 fundamental constants present before the Universe began:

The speed of light, Planck's constant, and the gravitational constant.

Scientists are still trying to figure out the Theory of Everything. That is the theory that explains where everything came from. Gravity is apparently the wild card. It's the number that no matter how many ways they try they cannot get it to compute.

Perhaps they need to go a bit further back to when even the fundamental constants didn't exist?

It'd still be 3/0. The Father, Son, and Holy Spirit existing in perfect love as One.

GOD's math is love.

"GOD is love."

1 John 4:8 NLT
